

Dr. Tristan Pearce is an Associate Professor and Canada Research Chair in the Cumulative Impacts of Environmental Change at the University of Northern British Columbia. His research and teaching interests focus on the human dimensions of environmental change with a strong focus on traditional knowledge systems.

Dr. James Ford is a Chair in Climate Change Adaptation at the Priestley International Centre for Climate at the University of Leeds. His research takes place at the interface between climate and society, and he is particularly interested in climate change vulnerability and adaptation. He is the editor-in-chief at the journal *Regional Environmental Change* and has been a lead author on national and international climate assessments including the IPCCs SR on 1.5C of warming.

David Fawcett is a Research Associate at the University of Northern British Columbia. His research focuses on climate change vulnerability and adaptation in the Arctic. David holds a Masters in Geography from the University of Guelph.
